TY-SPRAY C-210 Defoamer

Chemistry designed for spray cabinets and automatic wash systems. Formulated to control foam at any temperature.

SPRAYWASH DEFOAMER WASTE WATER TREATMENT

C-210 is our concentrated liquid, silicone, foam controlling agent for use in spray cabinets and automatic wash systems where foam control is mandatory.

- Prevents foam buildup at temperatures above 32° F.
 - Designed to knock down foam quickly and effectively.
 - Highly concentrated formula that requires low usage amounts.
 - Proven effective in oil laden and/or detergent laden systems.
-

USE INSTRUCTIONS:

TY-SPRAY C-210 is generally effective at a level of 0.02% to 0.05% of the system water for most applications. Most 150 to 300 gallon spraywash machines can use **TY-SPRAY C-210** at a level of 1/2 cup at a time while the unit is running until the desired foam control level is achieved. When a silicone-free surface is needed, use **TY-SPRAY NO FOAM**. For waste water applications, dilute **C-210** 1:10 with water and apply at a ratio of 1 quart of diluted material per 50 gallons of waste water.

TECHNICAL DATA:

pH(as is).....Essentially neutral
Color.....Milky white
Biodegradability.....Biologically inert
